Números enteros

Multiplicación

Μ

Multiplicando

n bits

М

Coma flotante

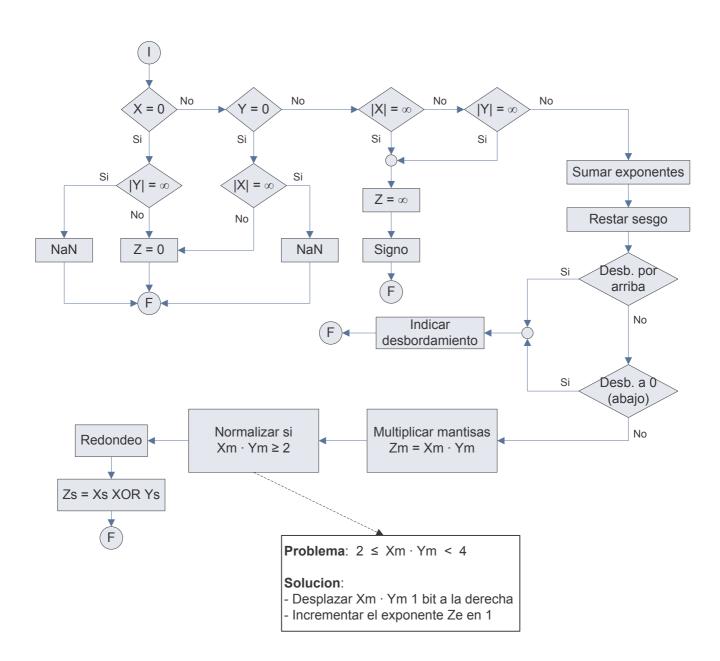

Siendo X e Y números reales en formato IEEE 754:

$$X = Xm \cdot 2^{Xe}$$

 $Y = Ym \cdot 2^{Ye}$

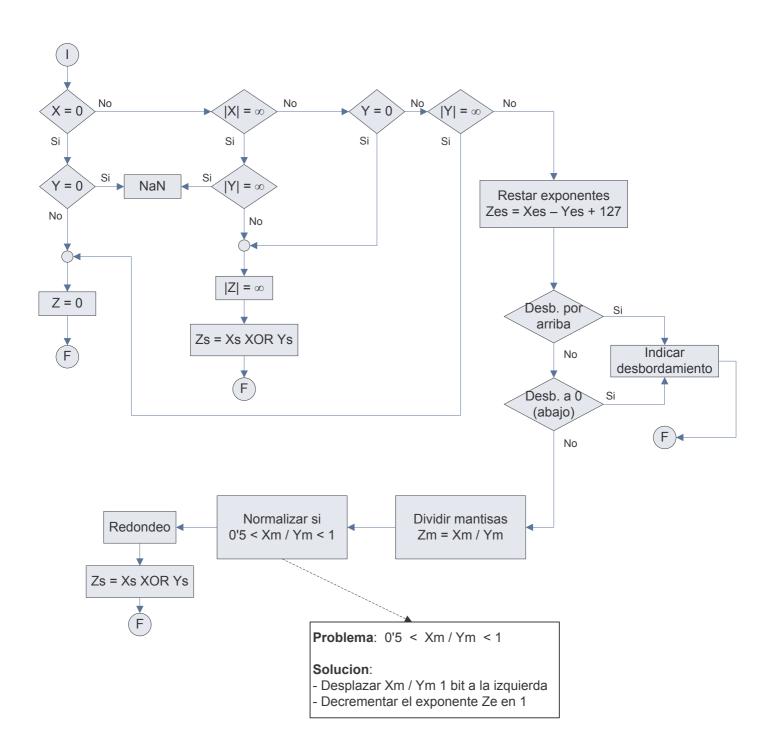

Multiplicación

$$Z = X \cdot Y = Xm \cdot Ym \cdot 2^{Xe + Ye}$$

División

 $Z = X/Y = Xm/Ym \cdot 2^{Xe - Ye}$

Suma y Resta

Si Xe
$$\geq$$
 Ye \rightarrow Z = (Xm \pm Ym \cdot 2^{Xe - Ye}) \cdot 2^{Xe}

Si Xe < Ye
$$\rightarrow$$
 Z = (Xm \cdot 2^{Xe - Ye} \pm Ym) \cdot 2^{Xe}
